

ZixConnectSM

Managed TLS Services

Benefits:

- Secure communications to key business partners
- No capital investment
- Deploys in just hours
- Transparent to end-users
- No hardware or software required

Features:

- Gateway design ensures email archiving compatibility
- Messages delivered to user in plain text
- Mandatory TLS ensures end-to-end security

Secure your email communication with financial regulators, other financial institutions and key business partners using ZixConnect. Users transparently send and receive encrypted messages – no passwords, no hardware and no client software required. With email in plain text within your network, your corporate retention policies are maintained.

The complexity of establishing Transport Layer Security (TLS) connections with multiple partners is reduced with ZixConnect, because only one connection is needed. With a single connection, you can securely communicate with all your business partners. As the leading provider of email encryption services, ZixCorp protects more than tens of millions of email recipients.

Fast Deployment, End-user Convenience

ZixConnect can be deployed in just a few hours and is completely transparent to your end-users. This means no end-user training is required. Users send and receive email just as they always have, and your email retention policies are enforced as usual. ZixConnect delivers email seamlessly, transparently and securely.

How ZixConnect Works

ZixConnect is designed to meet the needs of organizations that want to secure email communication with multiple partners but are concerned about the long-term complexity of managing separate TLS connections to each partner. With ZixConnect, a single TLS connection to the *ZixData Center*TM is all you need to send and receive email securely to all your partners. ZixCorp handles the set up and maintenance of establishing a secure connection with each of your partners.

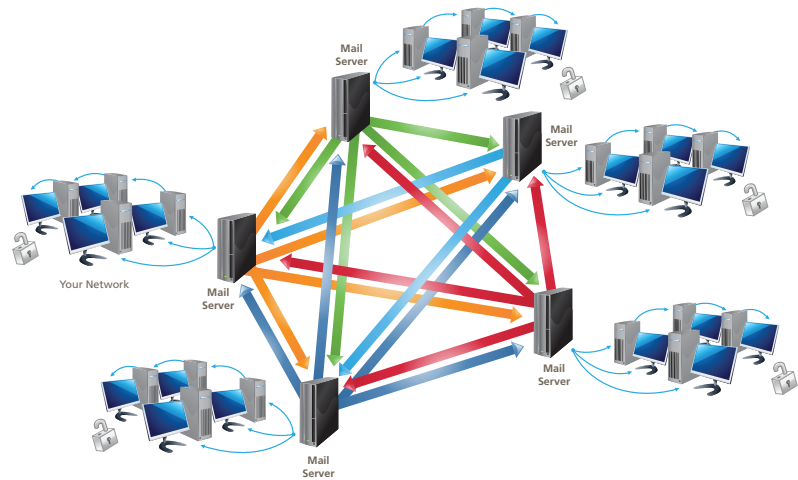

ZixConnect is also available for existing *ZixGateway*[®] customers that need to use TLS with certain business partners but would rather not set up and maintain the TLS connections directly from their ZixGateway system. ZixGateway customers that use ZixConnect do not have to set up any TLS connection, and yet their partners can use TLS to send and receive secure email to them. ZixCorp works with the partners to set up the TLS connection to the ZixData Center and then deliver the email to the customer's ZixGateway appliance. The ZixGateway customer does not have to do anything.
