- Encrypted read, reply and reply-all capabilities for all recipients
- Secure compose for portal users
- Portal branding and customization
- Message recall for additional control
- Support for two-factor authentication and Single Sign-On

A component of the Zix Email Encryption, ZixPort provides you a way to encrypt email communications with customers and business partners who do not have email encryption. ZixPort is a secure messaging portal for ZixGateway® and ZixMail® that offers your customers and business partners convenient and secure send and receive capabilities.

When you send an encrypted email using ZixPort, the recipient gets a notification email that links to your branded ZixPort portal. After signing in, the user can view his/her message and any attachments over a secure HTTPS connection. First-time users go through a one-time registration process. To ensure complete privacy, all return communication is secured using the Best Method of DeliverySM, which means your employees who use ZixGateway will receive the message transparently.

Branding and Configuration

ZixPort is branded to match the look and feel of your corporate Web site and configured to meet your communications needs. It lets users securely read and reply to encrypted email you send. To allow full, two-way communication with your customers and business partners, ZixPort includes reply, reply-all and secure compose capabilities. Your branded ZixPort portal will look and feel like an email system with an inbox, address book, sent and drafts folder. You can also create message expiration and password policies to meet your specific security requirements.

About Zix

Zix is a trusted leader in email data protection. Zix offers industry-leading email encryption, a unique email data loss prevention (DLP) solution, and an innovative bring your own device (BYOD) email solution to meet your company's data protection and compliance needs. Zix is trusted by the nation's most influential institutions in healthcare, finance and government for easy-to-use secure email solutions. For more information, visit www.zixcorp.com

Composing Messages

With ZixPort, your customers and business partners can initiate an encrypted email conversation with you from your ZixPort portal. You can add a "contact us" button on your Web site that allows them to securely contact you even if they do not have email encryption capabilities themselves. Thanks to ZixPort, secure two-way communication is guaranteed with email encrypted during transit.

Mobile Support

With the increased use of mobile devices to access email, you need an email encryption solution that is easy to use on any device. As a secure web portal, ZixPort enables simple, convenient access to secure email with optimized layouts, fully functional navigation and maximum user convenience. There are no apps to install and nothing to configure for the user to read and reply to messages.

Your customers and partners will appreciate that you are protecting their sensitive information while still making it easy for them to communicate with you from their mobile device.

Portal Integration

ZixPort is a highly customizable solution that can be tailored to meet your organization's specific requirements. If you already have a website for customers and partners, you can integrate ZixPort into your website to create a seamless experience for users. You can use Single Sign-On to automatically log users in from your website with their existing credentials. You can also display to users the number of unread secure messages they have, so they know when they need to access their messages. If you have multiple departments with different configuration requirements, you can create a different portal for each and customize it to meet their needs.

Reliable and Cost Effective

As a hosted solution, ZixPort is easy to set up and is managed and maintained by Zix. ZixPort resides in the ZixData Center™, which is an SOC3 certified, SOC2 accredited and PCI Level 1, DSS V3.1 compliant facility. The ZixData Center offers redundant power sources, storage units and security measures, and it has a track record of consistent 99.999% availability. Zix prides itself on maintaining the highest levels of performance and reliability.
